Dear Hiring Manager,

With **10+ years of experience** building high-performance mobile applications, I bring strong expertise in iOS development using Swift and SwiftUI, along with scalable architecture design and end-to-end product delivery across fintech, enterprise, and consumer domains. I also have working knowledge of Flutter for cross-platform development.

In my current role at Globant, I have contributed to large-scale enterprise applications for global clients, working on projects such as LA Clippers + Intuit Dome, Visit Red Sea, and WiZink Bank. I have led end-to-end feature delivery, collaborated with cross-functional teams, and contributed to scalable solutions across distributed engineering environments.

Previously, I worked with Alinea Invest, a YC-backed fintech startup, where I was part of the early engineering team that built and scaled a mobile platform with over **2M+ downloads** and **160K+ funded accounts**. This experience strengthened my ability to work in fast-paced environments and contribute to product growth from an early stage.

Some key highlights of my experience include:

- Contributing to mobile applications with **millions of users globally**
- Building a **#1 ranked app on the US App Store**
- Developing applications recognized with **Apple Editor's Note Award**
- Leading feature development from concept to production release

In addition to my professional experience, I am an active contributor on [Stack Overflow](#), with **27,000+ reputation**, ranking among the **top 2% contributors worldwide**, and helping more than **2.1 million developers** through my contributions. This reflects my strong problem-solving ability and passion for the developer community.

I also actively leverage modern AI tools such as GitHub Copilot, ChatGPT, Claude, and Google Gemini to enhance development productivity, improve code quality, and accelerate delivery.

I am particularly interested in opportunities where I can contribute to building impactful products, work on scalable systems, and continue growing as a senior engineer and technical leader.

I would welcome the opportunity to discuss how my experience can contribute to your team's success. Thank you for your time and consideration.

Sincerely,

Ketan Parmar
